A LOGIC COLORING GAME · WORKING TITLE

Bloom*sweeper*

Find the creatures. Read the garden.
Paint what blooms.

PITCH V0.1 · OCTOBER 2026

THE IDEA

Minesweeper logic, played on a hand-drawn coloring page

Every page is a dense ink illustration, packed with leaves, petals, vines and small creatures hiding in plain sight. First you hunt for the creatures. Each one you find becomes a clue: a bee knows how many flowers around it are in bloom, a rabbit never sits next to a fox.

From those clues you work out, by pure logic, which shapes bloom and which stay green. Then the calm part: you paint them, in your own palette. The finished page is a picture nobody else has.

Hidden object, minesweeper and an adult coloring book, folded into one loop.

STEP ONE

Find

Search a crowded drawing for the creatures on the list. Zoom, pan, poke at things.

STEP TWO

Deduce

Every found creature switches on its rule. Logic decides what blooms. Never a guess.

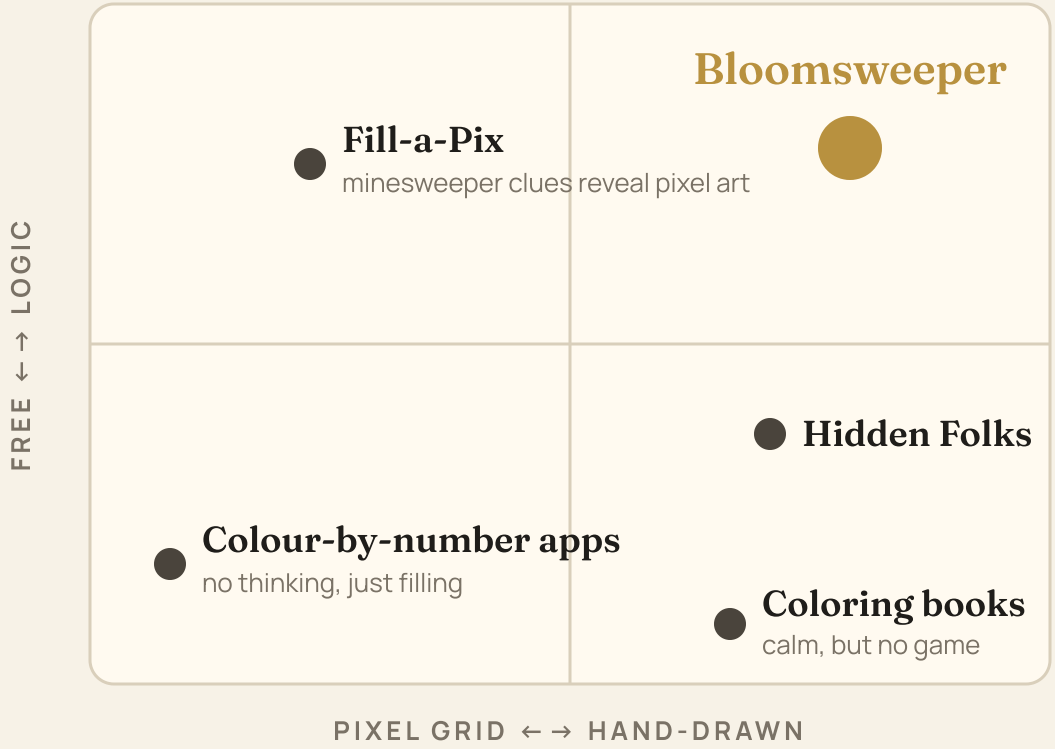

STEP THREE

Paint

Colour the solved shapes your way. Painting can reveal creatures you could not see before.

WHY IT IS NEW

Three proven pleasures, never on the same page

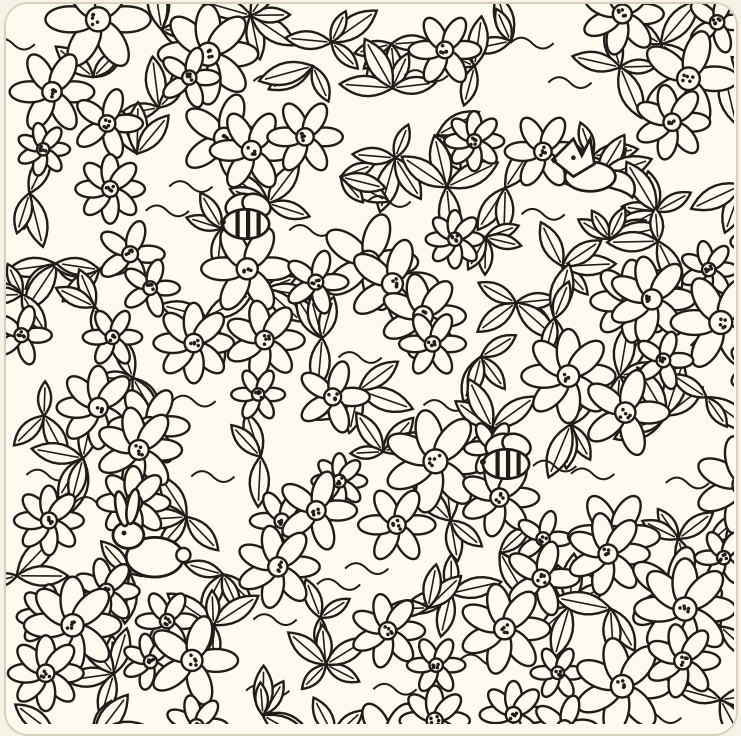

Fill-a-Pix	Minesweeper-style clues that paint a hidden picture. 4.8 stars from 1.2K ratings on the App Store, sold in puzzle packs. Always a pixel grid.
Hidden Folks	Hand-drawn, black and white, interactive scenes (2017). Overwhelmingly Positive on Steam, 96% of 3,210 reviews. Search only, no logic.
Coloring books for adults	The calm, the detail, the pride in a finished page. No game underneath.

Nobody puts no-guess logic onto a real illustration, where the shapes and their neighbours come from the drawing itself.

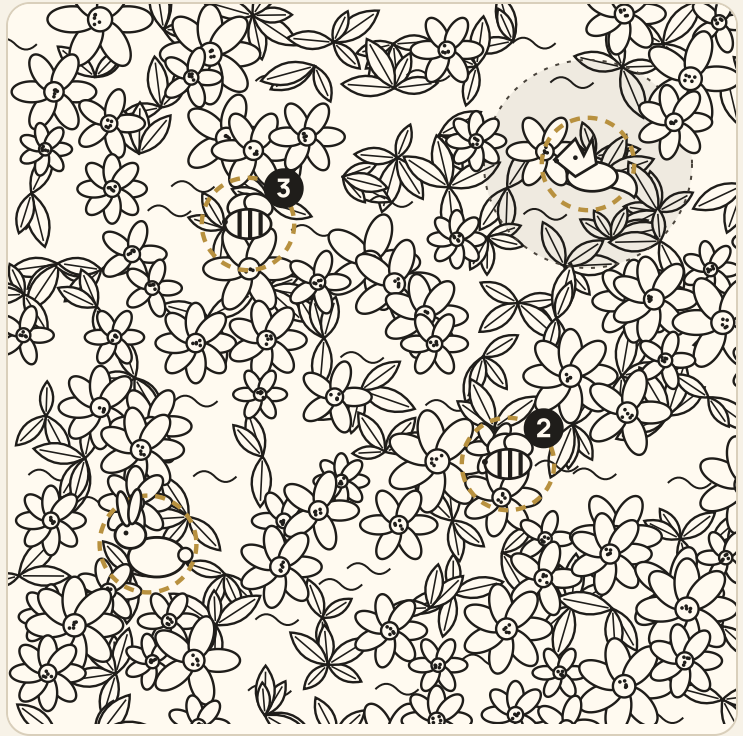

ONE PAGE, THREE STATES

The same corner of the garden, start to finish

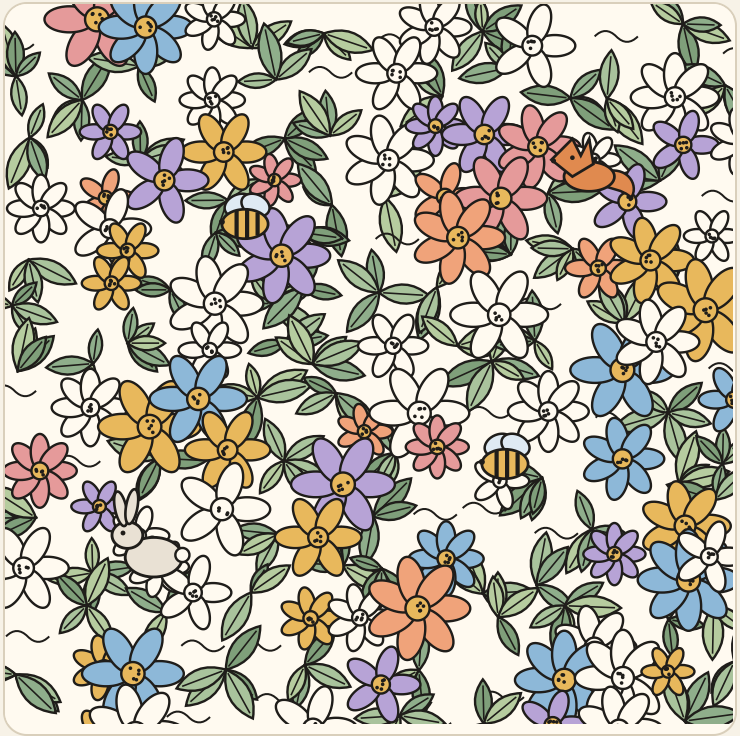

1 · FIND

A crowded ink drawing. The bees, the rabbit and the fox are in there somewhere.

2 · DEDUCE

Found creatures light up their clues. The numbers say how many flowers around each bee are in bloom.

3 · PAINT

The solution is locked in, the colours are yours. This page now looks like nobody else's.

THE RULES LIVE IN THE CREATURES

No numbers to memorise, just a garden that makes sense

Bee

Her number is how many flowers touching her are in bloom. The plain minesweeper rule, wearing stripes.

Fox

Everything within a fox's reach is shade: no blooms there. Finding the fox clears a whole corner.

Snail

Leaves a trail: all blooms along its path must connect in one line.

Rabbit

Sits on grass, so its own shape stays green. Never next to a fox.

Frog

Always touches water. Tells you which shapes are the pond, even when they look like leaves.

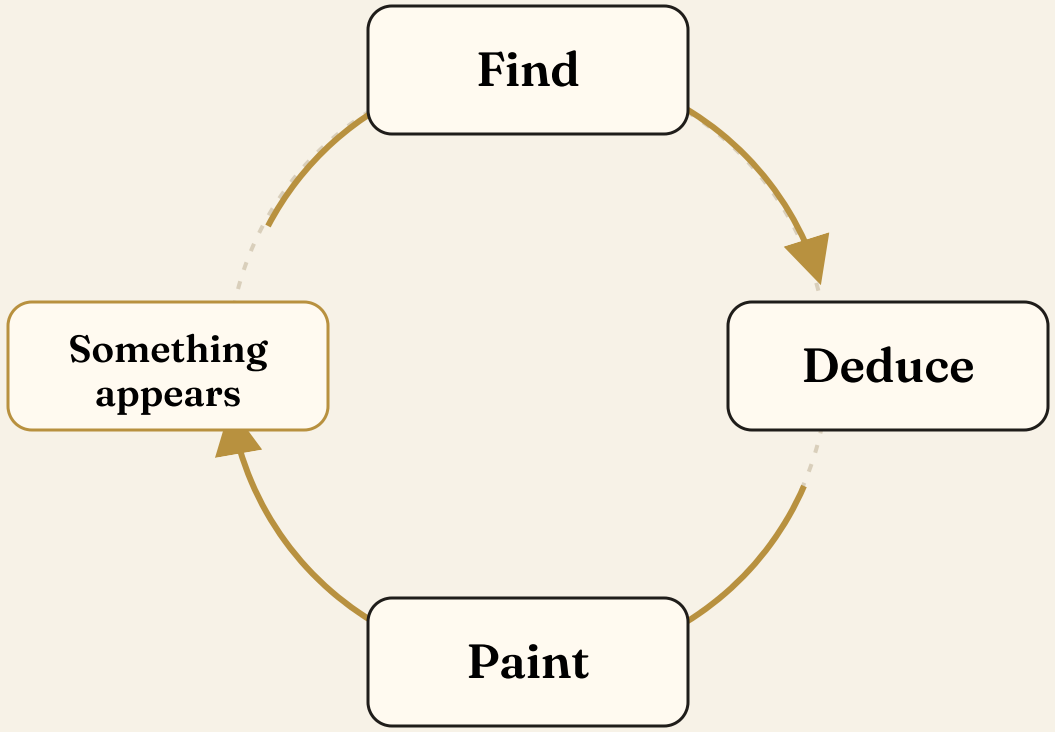

Firefly

Night pages only. Its glow tells how many shapes in its circle are lit.

Each chapter introduces one new creature, taught by a tiny page where the rule is the only thing to notice.

CORE LOOP

Painting feeds the search

Some creatures are drawn into the shading and only become visible once the shapes around them are painted: a frog hiding in an unpainted pond, an owl in the dark of a hollow. Painting is not only the reward, it is how the page opens up.

A page alternates between eyes and brain: a minute of searching, a minute of reasoning, a minute of quiet colouring. That rhythm is the game.

Session: a small page takes 5 to 10 minutes, a large one 30 to 60, and can be left and resumed at any time.

HOW IT FEELS

Calm, fair, alive

No boom

A wrong guess leaves an ink blot you can wash away. Nothing explodes, nothing resets.

Never a coin flip

Every page is checked by a solver: there is always a next move you can prove.

Everything reacts

Tap a bush and it rustles, a bird lifts off, a snail tucks in. The drawing is a toy before it is a puzzle.

Made for a big screen

iPad first, with Apple Pencil for painting. Pinch to zoom deep into the detail, as in a real book.

Readable for everyone

The logic never depends on colour: clues use icons and patterns, so colour-blind players solve the same pages.

Sounds of paper

Pencil scratch, page turns, birdsong. Quiet enough to play late at night.

CONTENT AND PROGRESSION

Chapters like a book of gardens

Garden

Bees, rabbit, fox. The tutorial chapter.

Forest

Snails and owls in the hollows. Larger pages.

Night Pond

Fireflies and frogs. Painting in the dark.

Old Town Rooftops

Cats, pigeons and window boxes over a city of tiled roofs.

The album

Every finished page is kept as you painted it. Export as phone wallpaper or print.

Page of the day

One small page a day for everyone. Missing a day costs nothing.

Compare palettes

After solving the daily page, see how other people painted the very same drawing.

PRODUCTION

Two hard problems, both solvable

Art pipeline	Pages are vector line art where every closed shape has an ID. The drawing defines the regions and who touches whom, so the art is the level. Dense ink illustration is the real bottleneck: one illustrator, a consistent style guide, and procedural pattern fills for background texture between the hero motifs.
Puzzle generator	A solver reads the region map, places creatures and clues, and keeps only pages with a single solution reachable without guessing. Difficulty is measured by the deductions needed, not by the number of shapes. Runs offline, pages ship as data.
Tech	Web first: SVG for the drawing and hit-testing, canvas for the painting. PWA on iPad and iPhone, store builds later through a native wrapper. The same phone-first workflow as our other projects.
Business (proposal)	Premium, one price, no ads, no energy. New chapters as paid expansions later. Page of the day free for everyone.

FIRST MILESTONE

A vertical slice that answers one question

Does finding, deducing and painting feel like one calm activity, or like three games taking turns?

3

pages

Small, medium, large. Hand-built first, generator second.

3

creatures

Bee, rabbit, fox. Enough for real deductions.

1

full loop

Find, deduce, paint, plus one creature revealed by painting.

0

guesses

Every page proven solvable by the solver.

Working title alternatives: Inkwild, Petal Logic, Hidden Bloom. Inspired by the feel of adult coloring books, Hidden Folks and Fill-a-Pix; all art and puzzles are original.
